

RAAHI

Rural AI Advisor for Household Income

Animated Hero Storyboard — Creative & Motion Design Brief | for Livelihood Setu, a voice-first AI counsellor for NSQF-aligned skilling under PM-AJAY GIA

ACT AS:

A world-class Brand Experience Director and Motion/Illustration Designer, specializing in warm, story-led animated hero sections, character-driven scene design, and accessible civic-tech interfaces for rural and semi-literate audiences in India.

THE TASK:

Design and build a single, continuously looping animated hero sequence for RAAHI — the public-facing identity of Livelihood Setu, a voice-first AI counsellor that lets a beneficiary call a number, answer eight questions aloud in their own language, and receive three ranked livelihood pathways with a spoken reason for each, grounded in real NSQF qualifications, training centres, and district demand data.

The hero must communicate this entire idea — discovery, action, human connection — in one cinematic, illustrated, 20-second loop, without relying on text the viewer must read to understand it. It should feel like a piece of honest, dignified rural signage brought to life, not a corporate SaaS product tour.

PROJECT CONTEXT (WHY RAAHI EXISTS):

Ministry of Social Justice and Empowerment · Problem Statement: Voice AI for Livelihood & Skill Recommendations
· Target audience: rural entrepreneurs, marginalized communities, and illiterate or semi-literate individuals who are excluded by text-based portals and app interfaces.

- Multilingual, completely voice-driven interface — no reading or typing required.
- Understands natural, colloquial speech to extract skills, background, location, and interests.
- Matches the caller's profile against real NSQF-aligned training programs and regional demand.
- Explains eligibility, benefits, and next steps back to the caller, out loud, in their own language.

The animation's entire job is to make one thing legible at a glance: **you don't need to read anything — you just call, and RAAHI talks you through it.**

BRAND — NAME & MEANING:

RAAHI — Rural AI Advisor for Household Income. Also the Hindi/Urdu word for “traveller” or “wayfarer,” which reinforces the core metaphor: RAAHI meets someone at a crossroads and helps them find their path (their *raah*) to an income. Clean acronym, no collision with existing scheme names.

Suggested taglines: अपना रास्ता, अपनी कमाई (“Your path, your earning”) / **“Find your path to income.”**

VISUAL DIRECTION & PALETTE:

Overall vibe: **golden-hour rural India**, illustrated and warm — deliberately not the generic cream-and-terracotta “AI-for-good” default. Think hand-painted highway signage, dusk light, dust and motion, one confident accent colour used sparingly and only with intent.

	Hex	Name	Usage
	#16283A	Deep dusk indigo	Sky, phone UI, status bar
	#E8A33D	Turmeric-marigold	Sun, ambient glow
	#6E8C4E	Mustard-olive	Fields, dust, secondary tone
	#43403A	Warm asphalt brown	Road (never pure black)
	#F1E6C8	Khadi-paper	Billboard panel, UI cards
	#D9720B	Marigold-orange	The one accent — CTAs, billboard highlight, waveform

TYPOGRAPHY:

- **Baloo 2** for the RAAHI wordmark and headline — rounded, warm, reads like Indian signage rather than a SaaS product.
- **Hind** for body copy, UI labels, and captions — built for Latin and Devanagari together, so English and Hindi lines sit cleanly side by side.

LAYOUT — THE HERO STAGE:

A single cinematic “stage”: one 16:9 illustrated scene that plays the entire storyboard as one looping sequence, sitting inside an otherwise ordinary hero section — wordmark and tagline above the stage, a helpline CTA below it. One bold visual moment, everything else quiet and out of the way.

- Above the stage: RAAHI wordmark (Baloo 2) + tagline (Hind), centered.
- The stage itself: full-bleed illustrated scene, rounded khadi-paper frame or none at all.
- Below the stage: primary CTA — “Call RAAHI” with the helpline number, marigold-orange, large tap target sized for a feature-phone-literate rural user on a small screen.

TECH STACK INTENT (FOR BEHAVIOUR/STYLE, NOT CODE GENERATION):

- Framework: Next.js (App Router mental model), component-based scene layers.
- Animation: Framer Motion-style orchestration driving a single timeline, not scroll-linked — this loop plays automatically on load and repeats.
- Illustration layer: SVG/vector scene layers (road, sky, billboard, character, bike, phone UI) composited and animated together — not a photographic image sequence, since the whole point is a warm, hand-illustrated feel.
- Effects: lightweight canvas or CSS particle work for dust/skid only; keep it restrained.
- Performance: the loop must be light enough to run smoothly on low-end Android devices over slow connections — the same devices RAAHI's actual callers use.

THE STORYBOARD — ONE CONTINUOUS 20-SECOND LOOP:

Six beats, orchestrated as a single unbroken sequence rather than scattered hover effects. The loop must close seamlessly: beat 6 dissolves back into beat 1's first frame.

1 • THE ROAD (0–4s)

Dusk-indigo sky fades into a warm marigold horizon glow. Mustard-olive fields and a warm asphalt-brown road scroll past in parallax — foreground fastest, hills slowest. A single rider moves along the road at an unhurried pace on a two-wheeler, a light trail of dust behind the rear wheel. Purely establishing: sets the palette and rhythm before anything happens.

2 • THE BILLBOARD (4–7s)

A weathered roadside signboard on wooden posts — khadi-paper panel, hand-painted-signage feel — drifts into frame with a slight parallax bounce. It reads, in bold Baloo 2: “RAAHI,” with the tagline in Hind beneath it, and the helpline number in marigold-orange, styled like trustworthy government signage (no official emblem misuse). Camera holds a beat so the number is legible.

3 • THE STOP (7–10s)

The rider notices the sign and brakes hard: a chalk-line skid mark draws itself on the road, a soft mustard-olive dust cloud puffs up, the bike leans. A held frame of the rider looking toward the billboard closes the beat — quick, physical, decisive, no longer than 3 seconds.

4 • THE CROSSFADE (10–11s)

A soft dissolve, not a hard cut, from the wide outdoor scene into a warm close-up of a phone screen in the rider's hand, the road blurred and desaturated toward dusk-indigo behind it.

5 • THE CALL (11–16s)

A phone UI drawn in the khadi-paper card style with an indigo status bar dials the RAAHI helpline number digit by digit, moves to a “Ringing...” state with a pulsing marigold dot, then “Connected.” A soft marigold-orange waveform animates across the card, and a two-line caption fades in beneath it in Hind — Hindi first, then English: “नमस्ते! मैं हूँ...” / “Hello, I’m RAAHI.” The digits bounce in softly; the ring pulses twice; the connect state resolves with a gentle flash timed to read as a spoken greeting.

6 • THE RETURN (16–20s)

A mirrored dissolve back out from the phone close-up to the wide road shot, which resumes its parallax scroll exactly where beat 1 left off, landing precisely on beat 1's first frame for a perfectly seamless loop.

STYLE KEYWORDS:

Warm, golden-hour, hand-illustrated, semi-flat vector, Indian-signage-inspired, cinematic loop, dignified, human-centred, accessible, unhurried, honest, trustworthy-but-not-corporate, civic-tech, story-led, seamless loop, lightweight, low-bandwidth-friendly.

FINAL PROMPT (COMBINED, READY-TO-USE):

“Design and build a single, continuously looping 20-second animated hero sequence for RAAHI (Rural AI Advisor for Household Income), the public identity of Livelihood Setu, a voice-first AI counsellor that lets rural and semi-literate beneficiaries call a number, answer questions aloud in their own language, and receive spoken, ranked livelihood pathways grounded in real NSQF qualifications and district demand data. The hero is a single 16:9 illustrated ‘stage’ inside an otherwise plain hero section: wordmark and tagline above, a ‘Call RAAHI’ CTA

with the helpline number below. Use a golden-hour rural palette — deep dusk indigo #16283A for sky and phone UI, turmeric-marigold #E8A33D for sun and glow, mustard-olive #6E8C4E for fields and dust, warm asphalt brown #43403A for the road, khadi-paper #F1E6C8 for the billboard and UI panels, and a single marigold-orange #D9720B accent reserved for CTAs, the billboard highlight, and the call waveform. Typography is Baloo 2 for the RAAHI wordmark and headline, paired with Hind for body, UI, and captions so Hindi and English sit cleanly together. The loop plays six beats as one unbroken sequence: (1) 0–4s, a parallax road scroll establishing a rider on a two-wheeler moving through dusk-lit fields; (2) 4–7s, a hand-painted roadside billboard drifts into frame reading 'RAAHI,' its tagline, and the helpline number in marigold-orange, styled like trustworthy government signage; (3) 7–10s, the rider brakes — a chalk-line skid mark, a puff of mustard-olive dust, a held look toward the sign; (4) 10–11s, a soft crossfade into a close-up of a phone screen in the rider's hand; (5) 11–16s, a khadi-paper phone UI dials the number, rings with a pulsing marigold dot, connects, and a marigold-orange waveform animates beneath a two-line spoken-greeting caption in Hindi then English ('नमस्ते! मैं हूँ' / 'Hello, I'm RAAHI.');

(6) 16–20s, a mirrored crossfade back to the road, resuming the parallax scroll and landing exactly on the loop's first frame for a seamless repeat. Build it as illustrated SVG/vector scene layers orchestrated with Framer Motion-style timeline animation in a Next.js component, not a photographic image sequence and not scroll-linked — it autoplays and loops on its own. Keep motion restrained and physical (dust, skid, parallax, digit bounce, waveform) rather than decorative, keep the frame rate and asset weight light enough for a low-end Android phone on a slow connection, and let the whole sequence read clearly with the sound off: a person sees an ad, stops, calls, and is greeted — no other text required to understand it."
